

aminodine spritz

between the lines

DMK's *aminodine spritz* does more than just revise ageing; its botanical formula is designed to actively work to smooth the appearance of cross-linked wrinkles.

How it works

Suitable for most premature ageing and environmentally damaged skins, the spritz contains the active ingredient, Aminoguanidine, which works to revise wrinkles and improve skin tone and colour due to its anti-glycosylation effect.

The science

When excess glucose or sugars in the body surround skin cells, tiny micro-organisms start to grow - very much like algae grows in water. Glucose is the primary source of energy in our bodies, but when there is too much of it, it becomes stagnant like still water and grows micro-organisms that stick the protein bonds of cells together. The elastin fibres and the collagen fibre - cells that give our skin its firmness and elasticity - are then glued together and cannot operate properly. At this point they cross-link and collapse, creating a furrow or deep wrinkle in the skin. Aminoguanidine's anti-glycolysation effect helps to prevent this from occurring.

How to use: Simply spray on cleansed skin before applying your DMK serums, oils and crèmes nightly.

Age revision is made easy with the DMK *aminodine spritz* - an essential part of your daily skin care routine.

Recommended Retail Price: \$74.50 (120mL)
